CHURN IS DEAD

The Renewal Evidence Packet

Make the forecast inspectable before you ask the business to trust it.

Complete this packet for one renewal before the forecast review. Label the quality and freshness of every item, record contrary evidence, then decide whether the current forecast state can be defended. This is a decision aid, not a prediction guarantee.

Use: Do not total these sections into a probability. Use the packet to identify missing or stale evidence and apply your own documented promotion rules.

Version: 1.0 -- October 2026

SECTION 1

Contract Reality and Decision Path

A correct renewal date does not prove that the buying path, scope, or approvals are understood.

Evidence field	Record this	Source and date
Commercial scope	Available-to-renew scope, expected scope, known change	Contract, quote, or CRM
Timing	Renewal date, notice period, and customer decision date	Contract plus customer confirmation
Decision steps	Remaining budget, security, procurement, legal, and signature steps	Named customer or internal source
Ownership	Owner and expected date for every remaining step	Customer-confirmed or internally asserted

Review This Section

Decision prompt: Which missing or stale item could change the renewal scope, date, or buying path?

Record: _____

SECTION 2

Customer Authority and Value Proof

A champion's enthusiasm and internal usage analysis are not substitutes for decision authority or customer-recognised value.

Evidence field	Record this	Quality test
Decision roles	Budget owner, approver, blocker, operator, and champion	Role verified by the customer
Recent access	Last direct interaction with every critical role	Date and interaction record
Expected outcome	Outcome the customer intended to achieve	Customer-confirmed
Value evidence	Observed result and customer acknowledgement	Separate observation from assertion

Review This Section

Decision prompt: Which authority or value claim is still only internally asserted?

Record: _____

SECTION 3

Risk, Response, and Contrary Evidence

A credible packet makes uncertainty and disconfirming facts visible instead of averaging them into sentiment.

Evidence field	Record this	Required follow-through
Specific risk	Uncertain event, source, and potential effect	Do not record a mood as a risk
Response	Action, owner, and next evidence date	Name the decision the action should change
Contrary evidence	Facts that weaken scope, timing, intent, or value	Never leave blank; write none found
Unknowns	Information still required to defend the forecast	Owner and due date

Review This Section

Decision prompt: What contrary evidence most weakens the current forecast, and who will test it?

Record: _____

SECTION 4

Evidence Register and Forecast Decision

Quality and freshness determine whether an evidence item should influence today's forecast.

Record	Allowed values	Decision rule
Quality	Customer-confirmed; Observed; Internally asserted; Missing	State the strongest defensible label
Freshness	Source date; expiry date; stale yes or no	Use intervals defined for your business
Current state	Unverified; Evidence building; Credible path; Commit; Closed	Apply documented local criteria
Review outcome	Retain; Promote; Demote; Unverify	Record reason, reviewer, and next date

Review This Section

Decision prompt: Does the current state survive the evidence test: retain, promote, demote, or unverify?

Record: _____

CHURN IS DEAD

Forecast Review Record

Record	Complete this
Account and renewal date	_____
Current forecast state	_____
Review outcome	Retain / Promote / Demote / Unverify
Evidence that changed	_____
Reason	_____
Reviewer and date	_____
Next evidence or review date	_____

Review outcome	Use when	Required record
Retain	Current evidence still supports the state	Reason and next review date
Promote	New evidence satisfies the next state's rule	Changed evidence and approver
Demote	Contrary, stale, or missing evidence breaks the rule	Broken rule and recovery action
Unverified	The packet cannot support a directional judgement	Missing evidence, owner, and due date

What to do next: Choose one renewal currently marked Commit. Complete all sections, challenge its weakest evidence, and record whether to retain, promote, demote, or unverify the forecast.
