The Champion Change Check

Recheck one commitment before keeping the old plan

01 Name the commitment

What is the customer trying to do next? Record the agreed goal, next task and date. Confirm whether that priority still stands.

02 Find the missing contribution

What did the departing person enable? Separate knowledge of the work, willingness to help and authority over time or funding. Mark unconfirmed roles as unknown.

03 Choose what happens next

Continue if the required people agree. Change the step if the goal survives but the route changed. Hold only the affected request if its decision owner is missing; name the next action and date.

Example: a second-department rollout

Fictional example, not a customer result.

Commitment	Missing	Choice
Run a workflow trial with the next team	Test time	Hold date

A new contact can help arrange the conversation. The next team's manager still needs to agree test time before the trial date is confirmed.

Copy this prompt. Add your observations.

Next customer commitment / date: [ ]
What the departing person enabled: [ ]
Knowledge / willingness / authority now: [confirmed / unknown]
Missing decision and person who can make it: [ ]
Continue / change / hold which request: [ ]
Next action, owner and customer update date: [ ]

Run on one commitment. Update the existing plan with what current customer people actually confirm. Do not infer a renewal probability from the departure.

Original editorial decision aid, informed by public GitLab and Microsoft role guidance. Not a measured retention intervention.
