Your biggest customer is second in line.

TWO ACCOUNTS. ONE AVAILABLE ENGINEER.

The largest renewal this quarter has a broken export and an awkward workaround.

A smaller customer has a stopped core workflow and no workaround.

Both have the same support entitlement. One engineer can take either issue.

Who goes first?

The revenue risk deserves a hearing.

The revenue matters. The workaround is costly. Losing trust could make the renewal harder.

Those points deserve a leader's attention. They don't restore the other customer's stopped workflow.

THE LIMITS OF THIS MADE-UP CASE

Assume no security incident, data loss or breached response promise. Any of those would change the case.

I'd restore the blocked workflow first.

I'd put a leader on the larger customer's call, explain the priority and agree the next update without inventing a fix time.

If leadership chooses the renewal first, I'd want them to say which customer's work stays blocked.

Who gets the engineer on your team?
